Traffic Alert

North Rillito Interceptor (NRI)
Sewer Rehabilitation Project

This is a series of traffic alerts that will be issued throughout the construction of the North Rillito Interceptor (NRI) Sewer Rehabilitation Project. These alerts will announce construction, detour and street closure information as it affects residents, businesses and traffic within the area. The 10-mile long NRI project is being completed in phases; **the current phase's construction boundaries are from Woodland Road to just east of Pantano Road.**

On **Tuesday, July 14 through Monday, August 3, 2015** the contractor begin advance work in preparation of rehabilitation work to sewer facilities located in the area of Tanque Verde Road between Pantano and Woodland Roads. This work includes installing sewer bypass piping, removing the median, and restriping the roadway along eastbound Tanque Verde Road. Construction is scheduled from **9 a.m. to 5 p.m.** each day.

- **Motorist should expect intermittent east and westbound lane closures to accommodate construction activities.**

On **Monday, August 3 through late September 2015** the contractor will complete sewer rehabilitation work in **the westbound lanes** of Tanque Verde Road.

- **Westbound travel lanes on Tanque Verde Road will be closed between Woodland (west end) and Pantano Roads.**
- **Center medians will be removed to allow westbound Tanque Verde Road traffic to be shifted into the eastbound travel lanes.**
- **Traffic along eastbound Tanque Verde Road will be reduced to one travel lane in each direction through this area.**

Motorist traveling through the area should plan for long delays and use alternate routes when possible. Bicyclists and pedestrians should use caution when riding/walking through the area.
